

## Associate in Applied Science

# Data Analysis (A25590DA)

## Data Analysis Career Track

### Overview

Data is the language of modern business—and data analysts are the people who turn it into decisions. In this program you'll learn to collect, clean, analyze, and visualize data using today's essential tools: Python, databases, spreadsheets, statistics, and analytics platforms.

The Data Analysis track deepens your statistical and programming skills—spreadsheet analysis, data-science programming, SAS, and data warehousing and mining—so you can dig into large datasets and surface the patterns that drive smart decisions.

### Employment Outlook

Organizations everywhere need people who can make sense of their data. The U.S. Bureau of Labor Statistics projects data and analytics roles to grow much faster than average through the decade, with strong salaries across nearly every industry for analysts who can find the story in the numbers.

Your degree can open doors to roles like Data Analyst, Statistical Analyst, Data Science Associate, Database Analyst, and Data Warehouse Analyst.

(Please note: CPCC does not guarantee employment)
